

Nut splitters cut through the nut without damaging the thread. They are easy to use and ideal for the removal of corroded, damaged or overtightened nuts. They can be used without damaging any adjacent components or devices. The cutting blades are suitable for re-grinding. Our nut splitter is suitable for wrench openings of 13-98 mm with angled head, or a max. wrench opening of 136 mm. This makes it ideal for use in cramped conditions. Our nut splitters are supplied with a manual hydraulic pump and a 1-m hydraulic hose.
